Education

2021–	**PhD in Economics**, Stanford University (expected June 2027)
2020–2021	**MSc in Economics**, London School of Economics and Political Science
2015–2019	**AB in Economics**, Princeton University

Fields: Macroeconomics, Development Economics, Environmental Economics

Migrant Networks and Climate Change · Job Market Paper
(with Shifrah Aron-Dine)

Migration as an adaptation strategy to climate change depends on whether people move in response to climate change and where they choose to relocate. A widespread finding in specific migration episodes is that people migrate to places with large diasporas. If this is an important force in international migration, then it could also be key for climate adaptation. Using global data on migrant stocks, flows, and climate exposure, we document three facts: migrant networks drive migration destinations, diasporas face climate exposure that mirrors their origins, and networks have adapted little to recent warming. To assess the implications of these facts for future adaptation, we develop a dynamic spatial model in which migrant networks influence migration decisions and climate shocks are spatially correlated. Networks affect the welfare cost of climate change through two channels: they anchor households to destinations that warming damages and concentrate diasporas in places whose climate shocks comove with those at home, reducing the option value of migration. Quantitatively, migrant networks increase the welfare cost of climate change for two-thirds of the world, with the largest losses concentrated in the poorest, most climate-exposed countries. Finally, we show that migration policy has important consequences for climate adaptation: temporary immigration restrictions deplete migrant networks in destinations that climate change spares, raising climate damages even after the restrictions end. However, targeted climate visas reduce damages by building migrant networks that facilitate future migration, with earlier policies generating larger benefits.

Misallocation versus Inequality
(with Chang-Tai Hsieh, Peter J Klenow, and Emma Rockall)

A stream of research contends that input misallocation takes a toll on aggregate productivity. If this is true, then why does it persist? One answer could be that policies to mitigate misallocation exacerbate inequality. We explore this possibility using data on Indian manufacturing firms and households in a model with both heterogeneous firms and workers. We focus on size-dependent misallocation given the ample evidence for size-dependent policies in India. We find that abandoning such policies would boost aggregate manufacturing productivity by 1–4%, but would also raise the skill premium and overall inequality, since larger firms employ more skilled workers and earn more profits for their owners. We estimate that size-based reforms could lower consumption-equivalent welfare on the order of 9%. This suggests removing misallocation may be unpopular because it worsens consumption inequality.

Work in Progress

Locality, Volatility, and Firm Dynamics in Developing Countries

The Growth Implications of Heterogeneous Firm-to-Firm Knowledge Spillovers (with Reiko Laski)

Selected Policy Work

2023– **The State of Youth Unemployment**
(with West Africa Vocational Education Academies)
An original survey of young Nigerians in Lagos, examining their experience of unemployment and underemployment.

Selected Presentations

2026 NBER Summer Institute (Growth and Long-run Macroeconomics); Climate Adaptation Meeting, AEA Meetings; Stanford Macro Workshop; Stanford Macroeconomics Seminar

2023–2025 UC Berkeley EEE-fest; Stanford Macro Day; Stanford Macro Workshop; Stanford 3rd Year Seminar

Grants, Fellowships, and Honors

2026–2027 Leonard W. Ely & Shirley R. Ely Graduate Student Fellowship, Stanford University

2026 Community Impact Award, Stanford University

2023–2026 RAISE Doctoral Fellowship, Stanford University

2021–2023 EDGE Doctoral Fellowship, Stanford University

2021 Graduated with distinction, London School of Economics and Political Science

2019 Phi Beta Kappa, Princeton University

2019	Graduated *summa cum laude*, Princeton University
2017	Shapiro Prize for Academic Excellence, Princeton University

Teaching Experience

2024–2025	Teaching Assistant, ECON 1: Principles of Economics, Stanford University
2018–2019	Course Assistant, International Monetary Economics, Princeton University
2016–2019	Economics Tutor, McGraw Center, Princeton University

Relevant Skills

Clearance: Special Sworn Status Researcher, U.S. Census Bureau
Software: Python, R, Stata, SAS, SPSS, Tableau
Languages: English (native), Akan (native), Spanish (basic)

Professional Experience

2020–2021	Research Assistant at International Growth Centre (IGC)
2018–2020	Economic Consultant at Edgeworth Economics LLC, Washington, D.C.
2017	Intern at Women's Microfinance Initiative (WMI), Uganda

Professional Activities and Service

2024	Mentor, Spelman-Sloan-Stanford Mentorship Program
2023–2025	EDGE Fellowship Mentor, Stanford University
2022–	Growth Reading Group, Stanford University
2022–2023	Recruitment Committee, Department of Economics, Stanford University
2020–2021	Programme for African Leadership, London School of Economics and Political Science
2017–2018	Outreach Chair, Princeton Women in Economics & Policy, Princeton University
